OBJECTIVE

AI/ML undergraduate seeking an AI/ML Engineer or Data Science Intern role. Hands-on experience building and deploying computer vision, NLP/generative AI, and voice AI systems — including transformer-based (T5) text summarization, face and speech recognition, and neural style transfer — as production-style REST APIs, backed by a strong Data Structures & Algorithms foundation.

TECHNICAL SKILLS

- | | | |
|----------------------------|--|--------------------------------|
| ● Python | ● Generative AI (GANs, Style Transfer) | ● Streamlit |
| ● SQL | ● RAG Pipelines | ● Hugging Face Transformers |
| ● PyTorch | ● Agentic AI | ● Data Structures & Algorithms |
| ● Scikit-learn | ● FastAPI | ● Voice & Speech Recognition |
| ● OpenCV / Computer Vision | ● Docker | ● Power BI |
| ● NLP & Transformers (T5) | ● Git & GitHub | ● Matplotlib & Seaborn |

PROJECTS

AI Text Summarizer — NLP & Generative AI

[GitHub](#)

Python, Hugging Face Transformers, T5, FastAPI, PyTorch

- Built and deployed an abstractive text-summarization system from scratch using a fine-tuned T5 transformer, engineering the full inference pipeline: text cleaning, tokenization, and beam-search decoding.
- Exposed the model as a production-style REST API with FastAPI and Pydantic request validation, served through a Jinja2 web interface for real-time summarization.

AI Attendance System — Computer Vision & Voice AI

[GitHub](#)

Python, Face & Speech Recognition, Machine Learning, FastAPI, SQL

- Built a production-style AI attendance platform combining face recognition (CV) and voice authentication for student identification, with a teacher dashboard for real-time analytics.
- Developed REST APIs (FastAPI) and SQL database workflows to support real-time, client-facing attendance management.

Neural Style Transfer — Generative AI

[GitHub](#)

Python, PyTorch, CNN, VGG19, AdaIN

- Built a generative AI application for artistic image synthesis using PyTorch and Adaptive Instance Normalization (AdaIN) with a VGG encoder-decoder architecture.
- Delivered the model through an interactive Streamlit web application for real-time, end-user style transfer.

E-Commerce Customer Segmentation — Data Science

[GitHub](#)

Python, Pandas, NumPy, Scikit-Learn, PCA, K-Means, Matplotlib

- Performed data cleaning, feature engineering, and EDA on e-commerce customer data; applied K-Means clustering and PCA to identify distinct customer segments, validated via Silhouette Score.

EDUCATION

B.Tech – Computer Science Engineering (Artificial Intelligence)

2023 – 2027

Mandsaur University, Mandsaur (M.P), India | CGPA: 6.55/10

CERTIFICATIONS

- GenAI Powered Data Analytics Job Simulation
- Introduction to Data Science Job Simulation
- Nvidia Introduction to Networking
- Defronix Certified Junior Security Professional
